

Project: Sentiment Annotation & Quality Evaluation		
Objective: Assign one sentiment label to each text based on its overall meaning while maintaining consistency and quality.		
Label	Use when...	Example
Positive	The text expresses satisfaction, appreciation, praise, or a favorable opinion.	"The instructor explained everything clearly."
Negative	The text expresses complaint, frustration, disappointment, or criticism.	"The application keeps crashing."
Neutral	The text is factual or informational without a clear opinion.	"The meeting starts at 10 AM."
Mixed	Both positive and negative opinions are expressed.	"The content was excellent, but the session was too long."
Confidence	Meaning	
High	Sentiment is clear and unambiguous	
Medium	Minor ambiguity or sarcasm is present	
Low	Context is insufficient to determine sentiment confidently	
Annotation Principles		
Judge the overall meaning, not individual words.		
Do not infer information that is not written.		
Use Mixed only when both sentiments are significant.		
Mark lower confidence for ambiguous or sarcastic text.		
Keep annotations consistent across the dataset.
